

SEO Site Audit Report:

<https://www.google.com/search?q=gulfkeralavacancys.com>

Audit Date: March 28, 2026 **Overall SEO Score:** 79/100 (Great)

1. Performance & Core Web Vitals (Manual Check)

The audit shows "No Data Available" for live metrics because the site needs more traffic for Chrome to report it, but based on our recent code changes, here is the technical status:

- **LCP (Loading Speed): Optimized.** We fixed the Header Logo and Featured Image. They no longer use "Lazy Loading," meaning the most important part of your site loads instantly.
 - **CLS (Visual Stability): Optimized.** We added fixed aspect ratios (16:9) to images. The site will no longer "jump" while loading.
 - **Mobile Speed:** The audit shows a fast potential load time, but warns that 3rd party scripts (like the AdSense ads we discussed) are the biggest delay.
-

2. Technical SEO Issues (Found by Ubersuggest)

✗ Issue A: Missing Meta Descriptions (139 Pages)

- **Problem:** Google doesn't know exactly what these 139 pages are about.
- **Impact:** Lower click-through rates from search results.
- **Solution:** You must go to Blogger **Settings > Meta Tags > Enable Search Description** and ensure every individual post has a "Search Description" filled out in the right-side menu before you publish.

✗ Issue B: Title Tags Too Long (104 Pages)

- **Problem:** Your titles are longer than **60 characters**. Google will cut them off with "..." in search results.
- **Impact:** Users can't read the full job name, leading to fewer clicks.
- **Solution:** Try to keep job titles concise.
 - *Bad:* "Urgent Recruitment for Gulf Kerala Vacancy in Dubai 2026 apply now for free today"
 - *Good:* "Dubai Recruitment 2026: 50+ Job Vacancies"

✗ Issue C: Broken Links (1 Page)

- **Problem:** One page is leading to a 404 error.
 - **Impact:** Bad user experience and minor SEO penalty.
 - **Solution:** Use the "Broken Link" list in Ubersuggest to find the exact URL and either delete the link or fix the spelling.
-

3. Successes & Strengths

- **On-Page Score (79):** This is very high for a Blogger site. Your technical foundation is solid.
 - **Organic Keywords (37):** Your site is already being discovered for 37 different search terms. This is a great start.
 - **Backlinks (28):** You have 28 external sites pointing to you, which gives your domain "authority."
-

4. Recommendations & Next Steps

1. **Fix Meta Descriptions:** This is your #1 priority. Spend time updating the "Search Description" for your most popular job posts.
2. **Verify Search Console:** Since we just added your verification meta tag, go to Google Search Console and click "**Verify**". Once verified, submit your **sitemap.xml** to tell Google to crawl all 150+ pages.
3. **AdSense Cleanup:** As discussed previously, turn off **Multiplex Ads** in AdSense. This will fix the layout issues shown in your earlier screenshots and improve your "Visual Stability" score even further
